

The PlymoVent mission

PLYMOVENT®
VEHICLE EXHAUST REMOVAL SYSTEMS

It's PlymoVent's mission to bring public awareness to the health hazards of vehicle exhaust emissions from Fire Apparatus in Fire Stations and the financial impact that it imposes upon your health and that of your fellow firefighters.

To accomplish this mission it's PlymoVent's goal to provide Intelligent Exhaust Ventilation Systems, which will capture and collect 100% of the toxic exhaust fumes directly from each fire apparatus. The benefit of this mission protects you from exposure to life threatening diseases and cancer causing chemical compounds found in exhaust emissions in fire stations.

As a Fire Chief/Officer you will improve the working conditions, which will reduce your fire department liability and employee grievances that you are exposed to today. You will reduce your costs of cleaning and maintenance, which is related to diesel soot and improper ventilation practices that you may have in your fire station today, thus yielding you a return on your investment in a PlymoVent Vehicle Exhaust Removal System.
